

Jenny's Class Garden Project

At the end of May, we completed a science lesson about seeds. The students were very interested in learning about how the seeds grow into plants that give us vegetables that we eat. We decided to plant a garden. We planted watermelon, zucchini, yellow squash, sunflowers and pumpkins. Our class really is excited about our vegetable garden.

First we planted our seeds in cups and kept them in the window sill of the classroom for a few weeks.

We watered our seeds.

Some of our plants are getting big.

We dug up the ground to remove rocks.

We pulled the weeds and dug out the roots.

Our planting poster and our plant growth chart.

Our students like to look at the plants growing in the garden.

We water our plants with a watering can.

We talk about what a plant needs to grow.

Gardening is fun!

Our zucchini plant is getting so big.
